We just recently put an agriculture conservation easement on Ranch No. 1, closing in 2014. The proposed stock water well will abut a new corral area on the the 200 plus acres in the conservation easement. This is a designated area within the conservation easement for this corral area. There is currently no other source of water. From this point we would be able to serve 5 different paddocks and the corral area. This would enhance are abilities for rotational and mob grazing and greatly improve our ranching ability witch now is in perpetuity. Warming of the climate and drought type conditions are driving best management practices. This stock water well will secure a clean source of drinking water for our livestock even as other conditions may not be so predictable. This stock water well will be the hub for the future of ranching on the first land claim in the state of Nevada.
